

## Milk carton multiplication

Collect the screw caps from milk cartons. Wash and allow them to dry.

Using some sticky circles, write the multiplication equation and stick it on the top of the lid and the answer to the inside of the lid.

Here I have colour coded the tables. 2s, 5s and 10s are green, square numbers are orange and the remaining tables blue.

# How to use them.

1. You can use them as a static display when not it use.
2. Give children a times table set of tops with the equation side showing and ask them to give you the answer. When they have given an answer, invite them to turn over the bottle top to check.
3. Put the bottle tops into a jar and pull one out.
  - Read out the equation and ask the children to tell you the answer **– or –**
  - Read out the product from the underside of the bottle top and ask the children to tell you the equation.
4. Share this idea with parents and encourage them to make a set for home use.
