You will need

someone to work with, and a small counter.

# Money moves

- Place the counter on one of the two shaded squares. The aim is to move the counter to the other shaded square.

- Take turns to move the counter one square at a time, across or up or down. You may NOT move diagonally.

- Each time you move the counter onto a non-shaded square, you score the amount on that square, e.g. if you move down onto the square marked 5, you score 5 points.

- Write down your own score with each move.

- The game ends when the counter is moved to the other shaded square. The person with the lowest total score is the winner.

Play several times.

What is the lowest score you could get?

| 7 | 7 | 8 | 7 |
| 8 | 9 | 9 | 9 |
| 8 | 9 | 7 | 8 |
| 7 | 9 | 7 | 7 |
